## Patent Pending NEW Step by Step Instructions

### Step #1

With the 6" paper and tape, cover-up all around the headlight area. Tape down the edges of paper so the wind cannot blow paper around. Apply 2 layer of tape around headlight for added protection.

### Step #2

First take the **sanding block**, sanding the entire surface of the headlight. Some headlights will just have a "yellow layer," others will have a "cloudy layer." Both layers must be completely sanded off in this process. Then take 600 grit sandpaper, sanding the entire headlight surface smooth until "balling-up" on sandpaper no longer happens. Then take the 1000 grit sandpaper, apply water on sand paper only, sand entire headlight smooth.

### Step #3

Take the white rag, clean entire headlight surface of dust, then take the "blue" Tack Rag, pressing lightly, dust-off the headlight surface.

### Step #4

Next take the "Headlight Renew" spray can from your box and **shake** for 3-4 minutes. Using the spray can, spray an evenly 1st-coat over entire headlight surface. Allow to dry approx. 2-3 minutes.\* Then apply a 2<sup>nd</sup> gloss-coat evenly over entire surface. (Practice spraying before applying to Headlight. Also refer to Instruction video for Spraying application!)

\*If a "cloudiness" appears in spray, use a *hairdryer/heatgun* and apply *hot-air* on headlight for 30 seconds, and "cloudiness" will disappear!

Proceed to the other headlight and repeat process beginning with step # 1. Allow both headlights to let dry for about 5 minutes, and then remove all tape and paper carefully from your automobile using caution not to touch headlights. 1<sup>st</sup> coat is a semi-gloss coat, 2<sup>nd</sup> coat is the gloss-coat for best results!
